

Nange Hai (Aiden)

Irvine, CA | +1 (949) 337-2812 | aiiidannn@gmail.com | <https://aiiidannn.github.io/>

EDUCATION

Harvard University

08.2026 – 03.2028

S.M. in Health Data Science

- **Selected Courses:** Computing for Big Data, Bayesian Data Analysis, Machine Learning for Healthcare

University of California, Irvine

09.2022 – 06.2026

B.S. in Cognitive Science & B.S. in Informatics (HCI), Minor in Computer Science

- **GPA:** 3.99/4.0 · **Honor:** *Phi Beta Kappa Honor, Dean's Honor List, Order of Merit*
- **Selected Courses:** UI/UX Project, Software Design, Web Software; Project Management; Data Analysis & DataViz, Prob & Inference, Data Structures & Algorithms; IoT, Robotics; Machine Learning & Data Mining, Stats Learning, Stats & Cogs Model

PROJECT

TreeHole EchoAI | UX&Web Project | *React, TypeScript, Figma, OpenAI API*

04.2025 – 06.2025, 07.2026 – 09.2026

- Designed and built, end to end, an anonymous peer-support AI product for students, from user research and wireframes to launch, validated through usability testing with 16 users on posting, browsing, and replying.
- Positioned AI as a connector between students, not a chat companion, amid rising regulation of emotional AI; after prototype review, limited AI to user-initiated, context-aware moments, codified into 8 AI interaction principles.
- To help students find peers with shared experiences and navigate long threads, designed: a) Echoes, matching posts by shared experience; b) Thread Pulse, filtering replies by type, never rewriting them; and c) Gentle Safety, offering crisis resources without blocking posts; together covering posting, reading, and replying, with 87.5% user adoption and 94% user satisfaction.

Impact Studio | Capstone Project | *Multi-Agent Systems, RAG, LLM Fine-Tuning, Prompt Engineering*

09.2025 – 03.2026

- Built an AI-powered script evaluation system as a proof of concept for a nonprofit creative organization, enabling studio leads to assess script-mission alignment without full manual review.
- Developed core modules: a) fine-tuned LLM (LLaMA via LoRA/Unsloth) for mission-aligned scoring; b) RAG pipeline (FAISS + sentence-transformers) for context-grounded community impact analysis; c) multi-agent system with an orchestrator (Gemini) that routes requests to the appropriate agent, with keyword-based fallback to ensure reliability; and d) a FastAPI backend to serve real-time AI responses and handle document ingestion.

PROFESSIONAL & RESEARCH EXPERIENCE

Technical Intern (AI/ML Engineer) | Rosie & Co Global

03.2026 – 06.2026

- Analyzed three user segments and identified core information architecture conflicts on the platform homepage. Executed a layered restructuring plan and iterated through three front-end prototypes, each informed by stakeholder feedback.
- Defined the AI assistant (Ciao AI) persona, conversation tone, and persona-based prompt card strategy across different user types to prepare for LLM integration.
- Built an automated data pipeline for fine-tuning dataset preparation, implemented LoRA-based LLM adaptation in Python, and developed a RAG knowledge base with vector retrieval to support context-aware, persona-specific AI responses.

UI/UX Design Intern | My Rental Spot

07.2025 – 03.2026

- Led the full design of the Business Search Page, starting from early requirements and success metrics to high-fidelity prototypes and production delivery. Worked closely with engineers to make sure design and backend logic matched.
- Ran iterative usability studies based on real task flows, increasing completion rates and cutting average task time to under 30 seconds. Built a post-release reporting pipeline tracking interaction, drop-off points, accessibility performance across versions.
- Architected the full contractor & PM payment workflow, covering state transitions (draft to complete), fund logic (escrow, release, refund), milestone validation, and dispute handling. Translated backend system behavior into multi-role UX with transparent status feedback and robust edge-case handling.

Research Assistant | UC Irvine CARL

09.2024 – 06.2026

- Co-developed CuttleBot in Python and ROS2, a biomimetic robotic agent that models adaptive decision-making through reinforcement learning and episodic-like memory, enabling context-aware foraging, avoidance, and spatial reasoning.
- Designed a 3D what-when-where memory matrix to encode spatiotemporal event relationships and support probabilistic retrieval for behavior policy updates.
- **PUBLICATION:** Wong, Q.Y., Zheng, K., Chao, S., Chhabra, V., Hai, N., Yuan, A., Zhu, Y., Krichmar, J.L., Espino, H. (2026). Delayed Gratification in a Robotic Model of Cuttlefish Behavior. *SAB 2026*.

SKILL & OTHER

Programming: Python, JavaScript, TypeScript, Java, C++, R

Software, Systems & Tools: HTML/CSS, Figma, React, Node.js, RESTful API; Git, Docker, ROS2

Machine Learning & Data: Scikit-learn, PyTorch; RAG, LLM Fine-Tuning (Unsloth/LoRA), LLM APIs (LLaMA, OpenAI, Gemini)
